Virtualization YANG Service Model (VYSM)
draft-shytyi-netmod-vysm-00.txt

Abstract

This document provides a specification of the Network Function Virtualization (NFV) YANG service model. The NFV service module serves as a base framework for managing an universal Customer-Premises Equipment (uCPE) NFV subsystem from the Orchestrator.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on March 21, 2019.

1. Introduction

Network Function Virtualization is a technology that allows to virtualize the network services running on dedicated hardware. This technology became a base for universal Customer-Premises Equipment (uCPE). The uCPE is x86 universal hardware (whitebox) that has a hypervisor. In other words, uCPE is a host that may run multiple Virtual Machines with guest OSs. Each Guest OS may represent a Physical Network Function. To manage from an Orchestrator the Network Function Virtualization Infrastructure inside the uCPE, the VNF YANG service model (VYSM) was developed.

2. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in RFC 2119 [RFC2119].

Link - is an entity that enables link layer communication of nodes.

Port - node connector to the link.

3. NFV service module Tree Diagram overview

This section provides an overview of the NFV service module. The figure below presents the Tree diagram of the NFV service module.
module: ietf-nfv-service
  +--rw virtualization* [name]
    +--rw name          string
    +--rw device*       string
    +--rw links* [link]
      |    +--rw link    string
    +--rw interfaces* [interface]
      |      +--rw interface   string
      |      +--rw ports* [port]
      |          +--rw port    string
      |          +--rw link?   -> ../../../links/link
    +--rw switches* [switch]
      +--rw switch    string
      +--rw ports* [port]
        +--rw port    string
        +--rw name?   string
        +--rw link?   -> ../../../links/link
    +--rw vms* [vm]
      +--rw vm          string
      +--rw ports* [port]
        +--rw port    string
        +--rw name?   string
        +--rw link?   -> ../../../links/link
      +--rw ram?        string
      +--rw cpu?        string
      +--rw storages* [id]
        +--rw id          string
        +--rw location?   string

4. Specification of the NFV service model

This section presents the specification of the NFV service model.
